**Vypress Auvis**

Vypress Auvis is a user-friendly, universal, one-way messaging client that will run in the system tray, allowing you to receive messages, network-wide alerts and broadcasts from network administrators. Auvis can even provide e-mail

notification. Vypress Auvis is oriented toward the non-professional user. It fulfills the function of a message processor, but does not allow users to send messages. One of the key features in Auvis is the ability to disable one or all of the extra features (for example, closing the program) through special registry keys. If you are the administrator of a corporate LAN or WAN and are looking for broadcasting and unicasting services for a middle to large network, Auvis is the ideal program for you and your network! Vypress Auvis can receive messages from Vypress Messenger (direct TCP messages plus UDP broadcasts), from WinPopup/Messaging Service (Windows NT/2000 or XP), from any Unix system that is SMB protocol enabled and from a NetWare 'send' command. Vypress Auvis, written in Microsoft Visual C++, is efficient (uses 400 KB of RAM), fast and can be run under any Windows

environment. Support for UDP broadcast messages includes a full set of security settings, including the ability to enable or disable messages from a specified IP-address or address mask. The user-friendly interface is incredibly popular with novice users. Today, Auvis is the most unique program of its kind on the market. It is specially designed for one-way message processing and does not in any way alter the original, full-featured Vypress Messenger. MAIN FEATURES * Receive messages from any Windows/Unix system that supports the SMB protocol * Receive Vypress Messenger incoming TCP messages * Receive WinPopup/Messaging Service incoming TCP messages * Receive MSN Network Alerts * Receive Windows Live Mail alerts * Receive E-Mail Notifications * Receive any broadcast messages as UDP packets * Multithread application * Multi-language interface * Preview message *

Select message type (SMS, Email, Jabber, DIGGS, Instant Messenger or Network Alert) * Open message in Vypress Messenger * Open message in WinPopup/Messaging Service * Send message * Set recipient * Shutdown program * Supports all security settings of vypress messenger * Extra functions b7e8fdf5c8

1. Network Alarms: Received network alarms are printed in the user's system tray. With one-click the user can receive the message, and schedule it to send to him/her later. The user may write, view or ignore the message via the Notify option. 2. Alerts: The user may write, view or ignore alert messages, which are sent via UDP broadcast or TCP/IP unicast. The user may chose which messages may be displayed on the system tray. In addition, the user may choose the date and time for messages to be sent/displayed. 3. Broadcast Messages: The user may choose which of the registered broadcast messages may be sent. The messages may be sent via TCP/IP multicast or UDP broadcast. 4. Outlook Message Read Receipt: When the user clicks on a sent message, it is automatically saved as a

new message. The user may choose either that it be sent, or as an attachment, or not be sent at all. 5. Multiple Inboxes: A message can be split into sub-messages, each of which can be sent to a different user or to one of a number of users. 6. Modules: Modules allow the user to customize the program to suit his/her needs. 7. Configuration: Through a convenient wizard, the user can set up the configuration parameters for the program. 8. Mini-Alarm: The program may be set to perform an initial and update-check every n minutes. This is useful when the user does not use it often, but wants to keep it "up-to-date" or just to have it alert to him/her. 9. Minimal Access: The user may choose a system-wide minimal access mode in which he/she cannot send messages. 10. Attachments: The user may attach a file to each message. He/she can select the file or open the default system file-

manager (Windows Explorer) to choose a file. The file may be modified before it is attached. The user may choose to automatically delete the attachment, or ask the user for his/her permission. 11. Single-Click Attachments: If the user chooses to attach a file to each message, he/she can attach a file once and keep it attached for all messages. 12. Message Filtering: The user can choose to send only specific types of messages to

**What's New in the Vypress Auvis?**

------------------ - Message: Static or temporary reusable message. - Broadcast: Broadcast message that may be static or temporary - Transport: The type of transport to use, - Security: Customize communication security, - Server: The server address, - Server name: The name assigned to the server, - Server port: The port used to connect to

the server, - Security level: Security level to use, - Message: The message to be broadcast, - Save text: Save text to edit or import, - Text: The text received, - Cmd/Ctrl: The command code to choose the message type, - Del: Remove a message, - Window: The window to be used for receiving messages, - Window name: The name of the window, - WinStatus: The win status that is needed for the message type, - Popup: Whether to use a popup to display messages. - Icon: The path to the icon. - Username: User name for the service/server, - Password: Password for the service/server. - Ping: The time to send a ping to the server. - Ping interval: The time interval to ping the server. - Flag: Enable or disable the server, - Type: The message type that the server sends, - Address: The IP-address or an address mask of the server to use, - IP: The IP of the server, - Port: The port of the server. -

Server name: The server name, - Server port: The port of the server, - Security level: Security level of the server, - Message: The message to be broadcast, - Save text: Save text to edit or import, - Text: The text received, - Cmd/Ctrl: The command code to choose the message type, - Del: Remove a message, - Window: The window to be used for receiving messages, - Window name: The name of the window, - WinStatus: The win status that is needed for the message type, - Popup: Whether to use a popup to display messages. - Icon: The path to the icon. - Username: User name for the service/server, - Password: Password for the service/server. - Ping: The time to send a ping to the server. - Ping interval: The time interval to ping

**System Requirements:**

# Windows XP, Vista, Windows 7, Windows 8.1 (32-bit, 64-bit), Windows 10 (32-bit, 64-bit) with Internet Explorer 9 or later 1.3 GHz dual core processor or better 2 GB RAM 3 GB available hard disk space Graphics card with 512 MB of RAM Recommended Specifications: Windows 7, Windows 8, Windows 10 (32-bit, 64-bit) with Internet Explorer 11 or later 1.4 GHz dual core processor or better 4 GB RAM
